

# NutriGel Starter Foliar Program

Crop Growth Stage Specific Plant Nutrition

The most critical stage is maximizing plant's yield potential is the first 25 days. Victus nutritional program is focussed on maximizing nutrient availability and plant health during this critical stage.

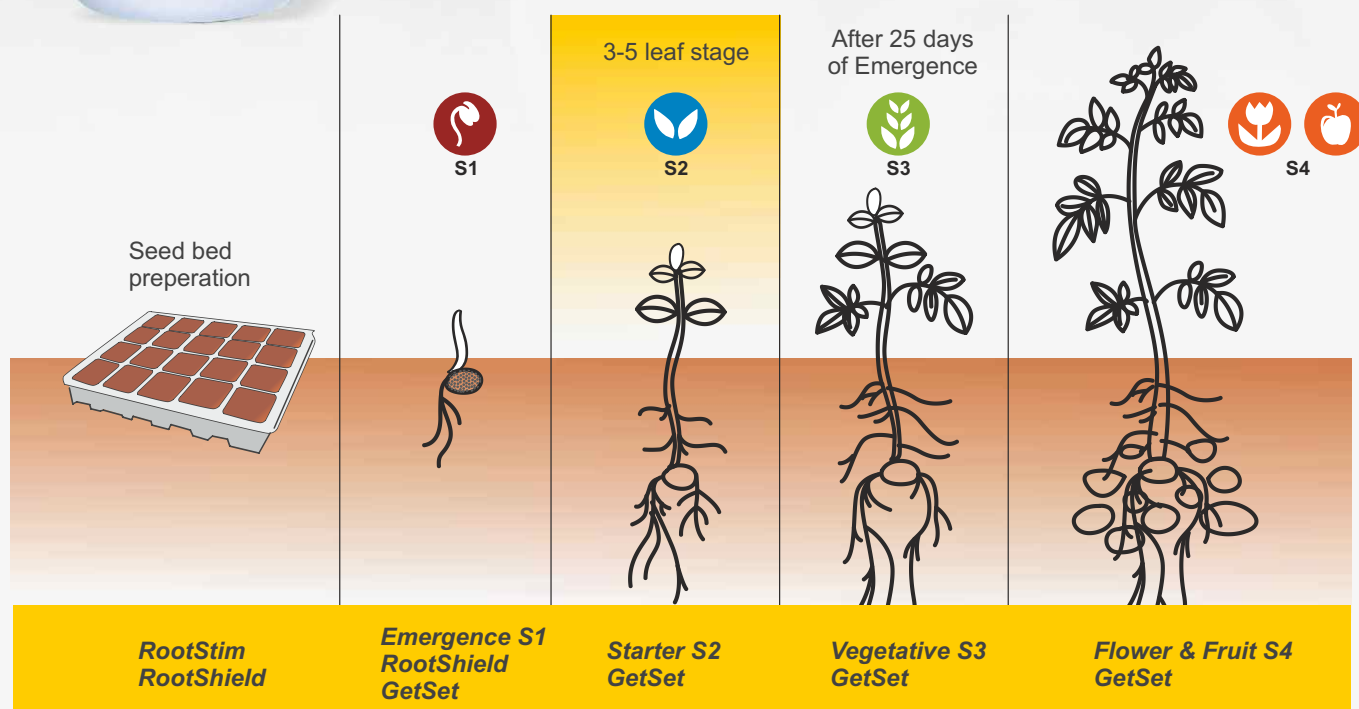

Nutritional products like NutriGel Emergence and Starter when combined with concentrated microbial products like RootShield (seed treatment, seed bed preparation and transplant root dip) and GetSet (foliar and soil application) enhances the pest and disease resistance and improves plant health.

RootStim is another specialty product that can be used during seed bed preparation, root dip before transplanting and root zone soil drenching for better establishment and root growth.

Root establishment and plant vigor is enhanced when NutriGel Starter is applied as a foliar spray between 3 to 6 leaf stage of the plant just after emergence.

NutriGel Starter when combined with bacterial product like GetSet improves plant health by enhancing pest and disease resistance.

NutriGel Starter is recommended as a foliar spray at 500 gm in 50 L water/acre. Two applications in 7 days interval between 3 to 6 leaf stage is recommended along with GetSet at 75 gm in 50 L water/acre.
